

Simplify Events and Group WiFi

The Cloud5 Conference Tool makes delivering, managing and monitoring group WiFi easy. Once configured, event planners have the power to manage the attendee WiFi experience without the help of their IT teams, and keep events running smoothly in a streamlined, centralized WiFi dashboard.

Stressfree Dashboard

Designed for non-technical users, the Cloud5 Conference Tool dashboard simplifies the management of complex group network settings and gives control to the event planner.

Smart Management

Prioritize wireless traffic for important groups, enable planners to schedule multiple groups with their own access credentials, and monitor bandwidth across many events.

Enhanced Security

Segment the network and keep group traffic separate from staff and others. Add Hotspot 2.0 auto-authentication with WPA2 encryption for truly secure WiFi access.

Key Features

- ✓ **User-friendly Dashboard:** Configure all aspects of conference connectivity from a web-based dashboard. Responsive design enables easy, on-the-go access from smartphones, tablets, etc.
- ✓ **Flexible Authentication:** Available via Access Codes or SSID with encryption.
- ✓ **Dynamic Bandwidth Settings:** Impose bandwidth limits for individuals or the group as a whole, set concurrent user limits for each event, and configure traffic priority with just a few clicks.
- ✓ **Custom Conference Portals:** Give each conference a unique look and feel for attendees. Manage and re-use custom portal pages using the Portal Manager.
- ✓ **Detailed Reporting:** Provides bandwidth usage and number of the event. In addition, the tool provides the event planner access to show live reporting during the event.

Cloud5 Advantage

- Technology expert serving thousands of hotels - from economy to luxury brands
- Marriott GPNS Full-Certified
- Highly Skilled Network Engineering & Support Team
- Dedicated Client Success Managers
- Tier 1-3 Support Team

Advanced Features

- Detailed User-Friendly Dashboard
- Customer Access Codes
- Dynamic Bandwidth Settings
- Detailed Reporting
- Edit Splash Screen
- Create Multiple SSIDs per Room
- Ethernet Only Events
- Bandwidth Reporting
- Custom SSIDs
- Meeting Planner Access
- Custom Portal Page HTTP Re-Directs
- Dark VLANs
- Custom Wired Ports
- Portal Bypass Mode

Simplify Events and Group WiFi

More Planner Control for Seamless Events

- ✓ Configure unique access codes for each group or have attendees bypass the captive portal completely.
- ✓ Combine Internet with other services or enable planners to sponsor premium connectivity for attendees.
- ✓ Control wired access from printers to presenting devices, easily map wired ports to each event or conference area.

Superior Experience for Event Attendees

- ✓ Seamless WiFi access: No matter what authentication option you choose, attendees can access the WiFi without any fuss.
- ✓ Tailored guest experience: Setup custom SSIDs and designate branded landing pages with key event information.
- ✓ Flexible bandwidth allocation: Optimize performance to better match demand and fairly allocate bandwidth by increasing bandwidth and users as needed.
