

Managed Video Security

Video Security Backed by Cloud5's Network & Service Expertise

Cloud5's robust video security solution is designed to address the safety needs of the hospitality market - helping properties meet or exceed brand security guidelines and providing AI-powered monitoring and analytics for enhanced guest and staff peace-of-mind.

Too often CCTV solutions are sold and installed by local providers that have no insight (or concern) into the brands overall network goals or security posture. These installed solutions typically sit unmanaged and unsupported on the network. Cloud5's video security solution is designed, deployed, managed and supported by Cloud5's team of experts – extending to CCTV the same dedication to service excellence and superior delivery that more than 5,000 hotels across the Americas rely on.

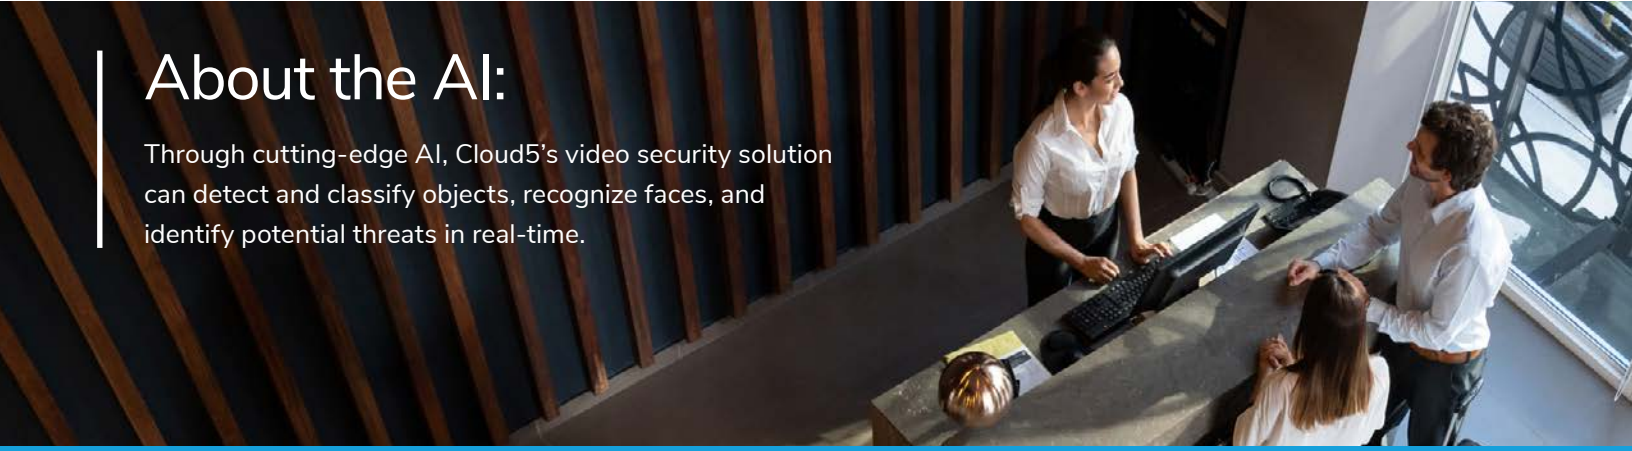

- Powered by **Hanwha Vision**
- Video security solution sits atop Cloud5's expertly designed networks
- Equipment Manufactured in South Korea with NDAA-Compliant / Trade-Compliant products to limit cybersecurity concerns
- "OnPrem" and "OnCloud" video options
- Single-Property or Multi-Property video solutions
- Fully "Supported & Monitored" Video Security Solution versus typical "Install and Forget" solutions

Managed Video Security

About the AI:

Through cutting-edge AI, Cloud5's video security solution can detect and classify objects, recognize faces, and identify potential threats in real-time.

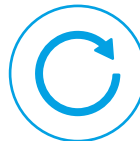

AI Powered Detections Include:

Face

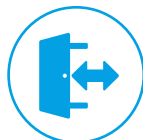

Virtual Line Perimeter

Loitering

Intrusion

Exit-Enter

Item Appear-Disappear
