Cloud5 Conference Services

Keep Your Groups Connected

Your hotel groups expect top Internet performance for their meetings and events. Requirements can get complicated with multiple groups in-house, unique SSIDs, and different user bandwidth guidelines. But Cloud5 makes Hotel Conference Internet Services easy. Let us take care of all the technical details to ensure your groups have a superior connectivity experience.

Cloud5 partners with customers by offering the expertise of our meeting operations organization, tailoring your event technology requirements to the needs of your customers and ensuring high attendee satisfaction.

Superior Connectivity for Group Meetings and Events

- **Manage Every Detail** – We hold your hand every step of the way from pre-event consultation and network assessment to day-of support. Our experienced team works with you to customize your network to fit your event from wireless SSID's, private VLANS, public IP's, traffic shaping/dedicated bandwidth, and additional wireless/wired connections.

- **Control Costs** – You'll save on CapEx costs and get the latest Internet equipment when you rent additional needed equipment from Cloud5. We'll help define what your network needs to minimize costs while delivering a superior meeting experience.

- **Support to Fit Your Needs** – We want you to feel confident and secure about every group meeting. Get the support you need based on the size and requirements of your client. We can help from set up to tear down. Choose from do it yourself to a dedicated remote T2/T3 technician by phone, or technical experts onsite for your event.

- **Custom Solutions** – With our team, customers can design their own connected experience and onboarding process to fit their event needs. Rely on Cloud5 experts to implement the exact experience that will work for your customers, rather than re-using what you already have.
